

# Your Guide to Not Being Bored in the Summer

Colin Creevey

# Problem: Summer is Boring

- School is out
- Parents are at work
- It's really hot outside

Hypothesis: If you knew what to do, you wouldn't be bored

# Observations

- I talked to 5 of my friends and asked them if they were bored during the summer
  - My friends rated their boredom on a scale of 1-5, with 1 being not bored and 5 being really bored
  - Most of my friends rated their boredom at a 4, so they're pretty bored
- I also asked how they found out about things to do to not be bored
  - My friends said they found out about things to do from other friends and from their parents

Solution utilizing  
computer  
science &  
technology:

An app that  
has events for  
different ages

Build an Events and Activities App

# Events & Activities App

- The Events and Activities app would have events and activities happening in a 15 mile radius
- You can input your age and the app will only show events and activities that you would like

# Events & Activities App

- With daily events in an Events & Activities App, you would click on it and see a list of what's happening that day
- When you know what's happening you won't get bored because you'll have so many things to do
- We can measure how many people are using the app, and survey them to see what they like the best
- After we measure what people like and don't like about the app and we learned from that, we can make the app better with different events and activities

Fun events and activities you would learn about from the app

# Possible Issues & Solutions

- Keeping app updated
- Finding events to add
- Deciding what events are best for what ages
- Update daily
- Pull from other community calendars
- Have event planners say what age it is appropriate for
